

**Data Received**

**Create an FTP server using AWS  
and Cent OS and Upload it on  
Cloud**

**We will trigger a python script  
in which we will extract the  
data in an executable format**

**After data extraction and transformation is  
done, we will store the output in .xlsx  
format as it will create an excel file which  
will be easier in data cleaning process to  
make in much faster and efficient way**

**Original Data is deleted**

**Output data will be stored in  
database using MySQL,  
MongoDB**
